Project Update Team 12

Vision Statement

Our goal is to improve and tailor personalized music experiences using machine learning. A music player that uses state-of-the-art machine learning to produce unique and congenial playlists centered around the user's preference.

Product Description

Our product uses Google's API *Tensor Flow* to create a personalized DJ. It is marketed to *anyone* who enjoys listening to music and wants to change the way they listen to music. Unlike our competitor, Pandora, our goal is to play songs that will flow well together.

The Pitch

We are designing a new web app that will create a unique listening experience for music enthusiasts. We will do this using the power of machine learning to shape a personalized DJ for you - whenever and wherever.

Improve your listening experience. Love your music.
